More on St. Jude

St. Jude’s Children’s Research Hospital

The St. Jude’s Children’s Research Hospital is a leading pediatric research hospital that specializes in treating children with the most complex and catastrophic forms of cancer and other life-threatening diseases. The hospital’s mission is to save as many children as possible, regardless of race, religion, or ability to pay. St. Jude is one of the few pediatric hospitals that does not charge patients for their care. Instead, the hospital relies on donations and grants to fund its treatments and research. The hospital’s research has led to many breakthroughs in the treatment of childhood cancer, and its findings have been used by hospitals around the world. St. Jude is located in Memphis, Tennessee, and is affiliated with the University of Tennessee Health Science Center. The hospital provides treatment to children from all over the world and has partnerships with hospitals in China and elsewhere. The hospital’s ongoing research and dedication to finding cures for childhood diseases make it a leader in the field of pediatric research.
